

WHY PRO GREEN ENERGY?

You get detailed financial analysis of your solution:

We don't sell off the shelf solar power systems. You get a tailored solar panel system matching your unique needs and budget. We conduct a detailed financial analysis of your current electricity usage. We then show you what different size solar systems will do for your bill now and into the future.

You get the maximum government solar rebate

Have you heard about the various state and federal government solar financial incentives but still a little unsure about how much you will actually save?

NSW government is supporting residential and commercial property owners with financial incentives to easily afford solar system and help in reducing greenhouse gas emissions and mitigating climate change.

You get the highest quality solar panels, inverter and mounting system

Cheap solar panels may seem appealing at first, but we know they will cause you heartache down the track. They are inefficient and often matched with a cheap solar inverter. The inverter is the first thing to fail on these inferior systems. Put simply, cheap solar systems cost you a lot more money long term.

We only use Highest quality solar panels like **REC**, **Hyundai**, **HT-SAAE**, **SUNPOWER** and inverters like **Fronius**, **Sungrow** and **Enphase**, and batteries from **Tesla**, **BYD** and **Sungrow**

IN-HOUSE FREE CONSULTATION

WE HAVE ACHIEVED

2-4MW RESIDENTIAL

2-4 Megawatts of residential PV system designed and installed successfully per year.
